I-GENESYS

Engineering Partner for Digital Agencies.

Grow without risking your reputation.

CAPABILITY OVERVIEW · 2026

Who is I-Genesys?

I-Genesys is a white-label engineering partner for digital agencies. We help agencies take on bigger projects and grow faster by providing trusted engineering capacity — without the cost, risk, or delay of building an in-house team.

Every project we deliver goes out under our partners' brand, never ours. That's not a policy - it's how our delivery model is built.

Trusted by digital agencies across the UK, USA, Europe, UAE, and Australia.

CUSTOM APPLICATIONS

The challenges growing agencies face every day.

Limited Capacity

Your team is at capacity, forcing you to delay or decline new opportunities.

Hiring Takes Too Long

Hiring experienced developers is expensive, slow, and unpredictable.

Delivery Pressure

As demand grows, maintaining quality and meeting deadlines becomes increasingly difficult.

Inconsistent Delivery

Multiple freelancers or vendors often lead to inconsistent communication, code quality, and delivery.

Mistakes Damage Trust

Every missed deadline or quality issue reflects on your agency - not your development partner.

Losing Control

The wrong partner can step outside their role - communicating directly with your clients and putting the relationship you've built at risk.

When you partner with I-Genesys, you get more than developers.

We communicate before you have to ask.

We surface risks early - not after they become problems.

We protect your trust above our own revenue.

We own outcomes. No excuses, no blame-shifting.

One trusted engineering partner. Flexible ways to work.

Project Delivery

White-label project delivery from discovery to launch.

Dedicated Developers

Experienced developers working as part of your team.

Managed Engineering Teams

A complete engineering team delivering under your brand.

Reserved Engineering Capacity

Reserve dedicated engineering capacity so you're always ready to say "yes" to the right opportunities.

Strategic Engineering Partner

More than a supplier - a trusted engineering partner invested in your agency's long-term success.

Technology changes.
Engineering principles don’t.

Engineering built for what’s next.

We don’t claim a finished AI portfolio. What we have is real delivery experience across complex, emerging technical domains - the same engineering fundamentals that AI integration actually depends on.

Proven in Production: VR & Immersive Applications

Meta Quest training simulations and product experiences - delivered and in use, not aspirational.

APIs & System Integrations

The connective layer any AI system depends on.

Cloud Infrastructure & Data Architecture

Scalable foundations built to handle real workloads.

Custom Software Engineering

Disciplined delivery, not experimental prototypes.

We’re extending into AI integration and automation as client demand grows - built on the same engineering discipline, not overnight claims.

Real partnerships.
Real outcomes.

Solo Agency Owner

UK-Based Digital Agency

The Challenge - As a one-person agency, he couldn't afford to work with a vendor buried behind account managers and support tickets. He needed an engineering partner he could reach directly, who would treat a solo operation with the same seriousness as a larger client.

The Solution - Direct Slack access and a personal line to the I-Genesys founder - no gatekeepers, no handoffs. Full involvement in every decision, exactly as it would be with an in-house hire.

The Result - The partnership outlasted the original engagement. When he later exited the business, he personally introduced I-Genesys to his own client - and told them to expect to pay more than he had, because the value was worth it.

In their words: "You're the mirror copy of mine."

Growth-Stage Marketing Agency

In-House Team of 15+

The Challenge - An established agency with its own internal team needed an engineering partner who could integrate seamlessly into existing workflows - not operate as a separate, disconnected vendor alongside them.

The Solution - Full integration into the agency's own Slack workspace, daily communication with their internal team, and a structured cadence of twice-weekly meetings.

The Result - The engineering partnership became load-bearing to how the agency operates - consistent delivery, a team that trusts the work without needing to check in constantly, and a relationship the agency now considers essential to how they plan and grow.

In their words: "We can't think if there is no I-Genesys."

Why growing agencies choose I-Genesys.

Transparent Communication

If there's a risk, you hear about it early - not after it becomes a problem.

Founder Involvement

You're not handed off to account managers. Our founders stay close to every partnership.

Reliable Delivery

When we commit to something, it gets delivered. No excuses, no shifting deadlines.

Long-Term Partnerships

We're not chasing the next project. We're investing in agencies we want to work with for years.

It's for you to say: **“I don't worry about development anymore. I-Genesys takes care of it."**

Meet the founders.

Jenish Mandalia
FOUNDER

Sahil
CO-FOUNDER & CTO

I-Genesys was born out of dissatisfaction with the ethics and environment of the industry. Founded by two friends with engineering and telecommunications backgrounds, we set out to build something different - an engineering partner defined by honesty, not just delivery.

3-Story
PURPOSE-BUILT HQ

Rajkot, India
WHERE WE'RE BASED

Why our delivery model works.

Agencies aren't really asking "why India?" They're asking whether a team thousands of miles away can be trusted with their clients. Here's how we answer that.

Founder-Led Communication

You work directly with the founders - not layers of account managers.

Built for White-Label Delivery

We integrate into your tools and process while staying invisible to your clients.

Proven Engineering Team

37 professionals delivering web, mobile, VR, and custom software - not a freelancer marketplace.

Flexible Scaling

Scale up or down without recruitment delays or long-term hiring commitments.

Time-Zone Friendly

Daily overlap with UK, Europe, UAE, and Australia - structured communication for North America.

Long-Term Partnerships

We're not looking for the next project - we're looking for the next five years.

We're proud to be an Indian engineering company. But we don't expect clients to choose us because we're in India - we want them to choose us because we're the partner they trust most.

Traditional offshore vs. I-Genesys.

TRADITIONAL OFFSHORE	I-GENESYS
Lowest cost wins	Best long-term value
Developers only	Engineering partner
Different priorities	Aligned with your agency
Anonymous resources	Founder-led relationship
You manage everything	We own delivery
Vendor	Partner

Choosing an offshore partner should reduce your delivery risk - not increase it. That's exactly what we've built I-Genesys for.

OUR PROCESS

How trust is built, step by step.

Trust isn't a promise. It's built on a schedule - here's exactly how.

1

DAY 1

Meet the real team

Founders involved from day one. No account manager handoffs.

2

WEEK 1

Risks flagged early

Your first weekly update arrives exactly on time.

3

WEEK 2

We take ownership

We challenge assumptions and ask the questions that matter.

4

MONTH 1

Relationship review

We ask: how can we make this partnership even better?

5

QUARTER 1

Ongoing rhythm

Daily delivery, weekly updates, monthly review - the norm, not the exception.

How we deliver - and protect what matters.

1 Discovery
2 Planning
3 Development
4 QA
5 Launch
6 Support

Built for Enterprise Trust

NDA as Standard

Signed before any project details are shared - confidentiality is the default, not an add-on.

Access Control

Structured, need-based access to systems and environments throughout delivery.

Client IP Protection

Your intellectual property stays yours - protected contractually and operationally.

Full Code Ownership

Everything we build belongs to you, fully and unconditionally, from day one.

Secure Development

Security practices built into our engineering process, not bolted on afterward.

White-Label by Design

Every project ships under your brand. Your client relationships stay entirely yours.

The trusted engineering partner for digital agencies.

We'd rather lose a project than lose your trust.

Let’s work together.
